

High Performance Contamination Control Zones

Cobalt

Titanium

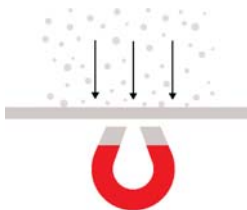

Dycem ProtectaZone is a light weight, low profile High Performance Contamination Control Zone. Easy to use, it provides a simple, long lasting and highly effective method of minimising contamination.

Typical application Zones

- All entrances to prevent ingress of contamination.
- All exits to stop contamination.
- In gowning rooms, hallways, entryways, transfer hatches and airlocks to minimise cross contamination.
- Inside the critical area adjacent to critical products and processes to prevent contaminants from reaching critical airborne height.

Our diverse market place includes: Pharmaceutical, Aerospace, Semi Conductor, Disc Drive, Bio Medical, Research Labs, Hospitals, Medical Device, Fibre Optic, Computer Rooms, Optical, Automotive, Printing, Biotech, Microelectronics, Packaging and Food.

Our blue chip user base of thousands include companies such as Glaxo SmithKline, IBM, Sony, Lilly, Johnson and Johnson, Motorola, Roche, Pfizer and Texas Instruments.

Short-range electromagnetic forces (Van der Waals) enable Dycem to attract, collect and retain over 99% of particles.

ProtectaZone

The ProtectaZone is a high performance contamination control zone designed to:

- Attract airborne particles to it's surface.
- Decontaminate soles of personnel shoes and booties.

This contamination is held on the surface until cleaning takes place.

Easy to Clean

Quick and easy to maintain. Simply clean the surface of the mat with a damp sponge and detergent. Squeegee dry and wipe up the detergent and contaminant residue. The mat is then immediately ready for re-use.

Specifications

| | |
|----------------------|--|
| Width & Length: | 1.1m (3ft'7") x 2m (6ft' 6") Special lengths of 0.9m to 2.75m are available with a standard width of 1.1m. |
| Thickness: | 3mm (0.125") tolerance +/-0.5mm |
| Colour: | Please see colour swatches above |
| Anti-Microbial: | Dycem products contain an integral anti-microbial additive. Successfully tested against 50 common organisms including Salmonella, E.coli, Listeria, Campilobacter, Pseudomonas, A.Niger (black spot mould growth) Algae, MRSA. |
| Static Dissipative: | 10 ⁸ |
| Chemical resistance: | Resistant to most chemicals |
| Outgassing | Purity information on outgassing please visit www.dycem-cc.com/tpapers |

"Independent tests carried out at GlaxoSmithKline prove that Dycem Contamination Control Zones prevent >99% of all viable and non-viable foot and wheel borne contamination from entering a critical area."

**Dr Caroline Clibbon, Senior Microbiologist
GlaxoSmithKline, UK**

ProtectaMat - is a loose laid mat designed to control foot borne contamination in areas of light traffic. Ideal for use at entrance/exit ways to small laboratories.

CleanZone - is a high performance contamination control mat or floor covering designed to attract, collect and retain viable and non-viable contamination. Installed with easy-in, easy-out self adhesive panels. Suitable for light wheeled traffic and heavier pedestrian flows. Available in a range of mats or floor coverings to suit your facilities needs.

WorkZone - is a heavy duty version of CleanZone designed for use where there are concerns about contamination and cross contamination from personnel, and the wheels of carts including pallet trucks, fork lifts, trolleys & vessels.

Cleaning - in many cases your own facility approved equipment detergents, disinfectant & microbial agents can be used. Alternatively, Dycem have a range of high performance cleaning equipment & detergents, please contact us for details.

Bench Mat - prevents the movement and loss of small components. Also use in the laboratory to cushion and stabilise fragile equipment.

Non-slip products - cushion, stabilise and protect products and equipment. Available in reels, mats, self-adhesive panels and discs.
